### Ejercicio Supernode (2017 1c 1p e1)

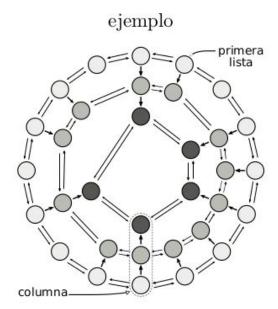

#### Ej. 1. (35 puntos)

Sea la siguiente estructura de listas doblemente enlazadas encadenadas entre si.

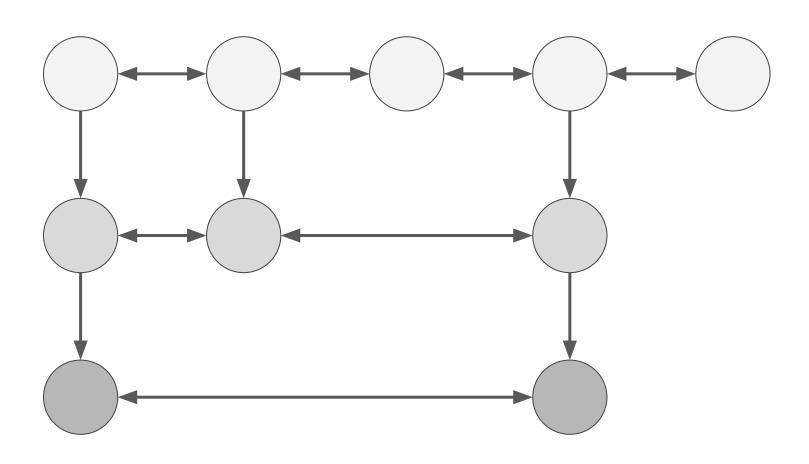

```
struct supernode {
supernode* abajo,
supernode* derecha,
supernode* izquierda,
int dato }
```

- todos los nodos pertenecen a una lista doblemente enlazada
- todos los nodos son referenciados desde algun otro nodo en otra lista (excepto en la primera)
- todas las listas respetan el orden de los nodos que las apuntan

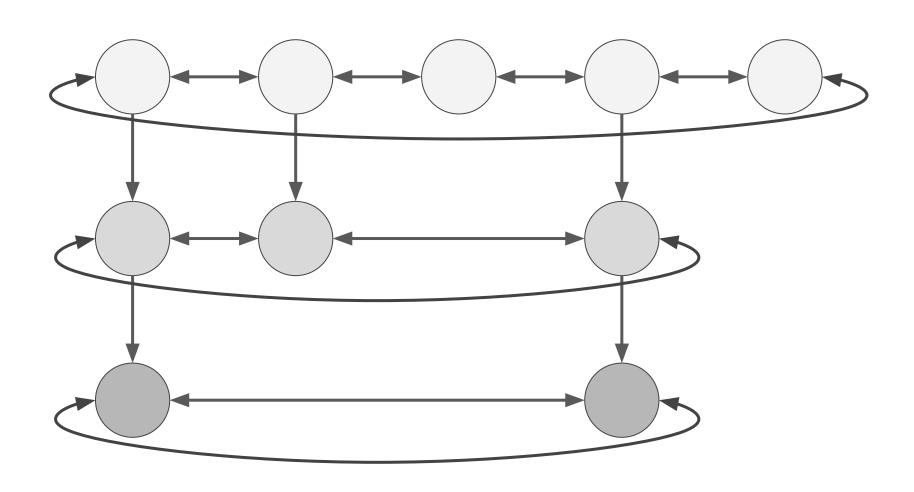

Implementar en ASM las siguientes funciones.

## Supernode

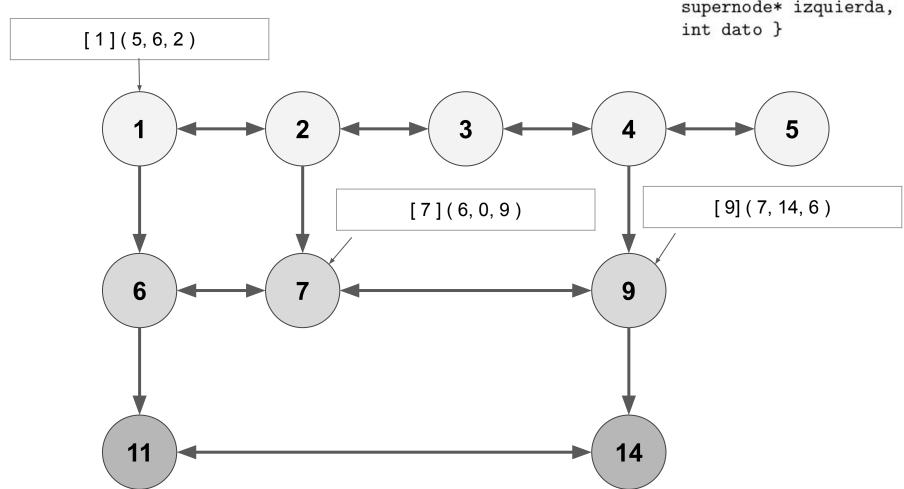

# Supernode

## Representación

[ID](IZQ, ABA, DER)

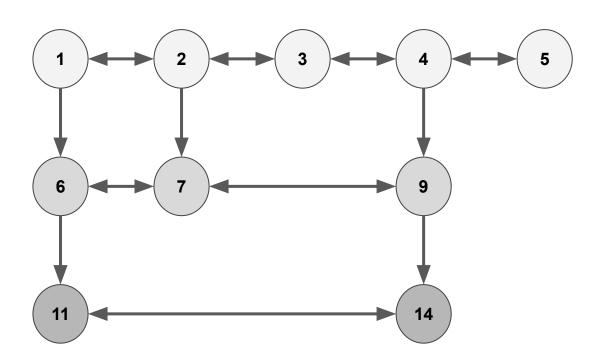

struct supernode {
supernode\* abajo,
supernode\* derecha,
supernode\* izquierda,
int dato }

#### Representación

#### Setup

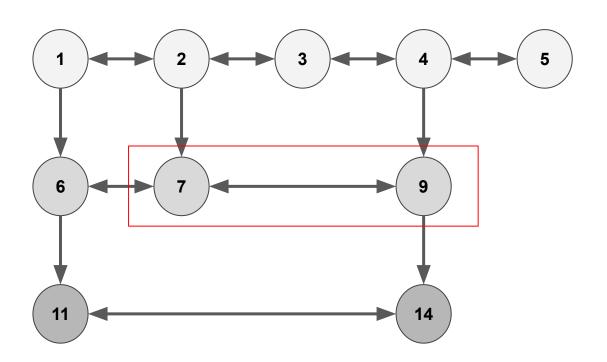

```
[01] (05, 06, 02) [02] (01, 07, 03) [03] (02, 00, 04) [04] (03, 09, 05) [05] (04, 00, 01) [06] (09, 11, 07) [07] (06, 00, 09) [09] (07, 14, 06) [11] (14, 00, 14) [14] (11, 00, 11)
```

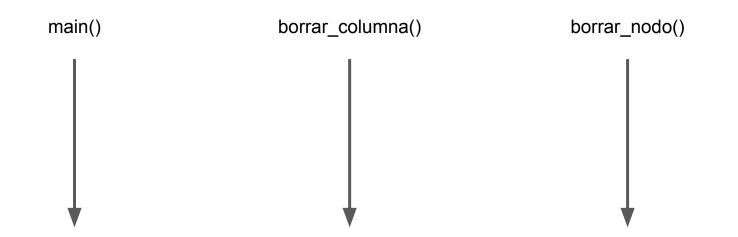

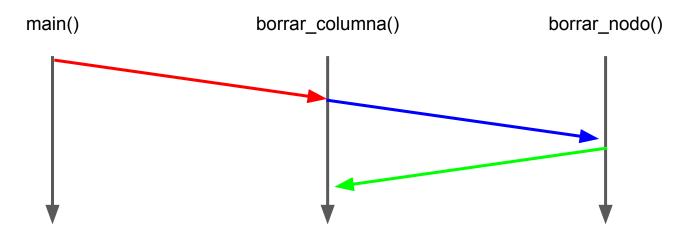

#### Representación

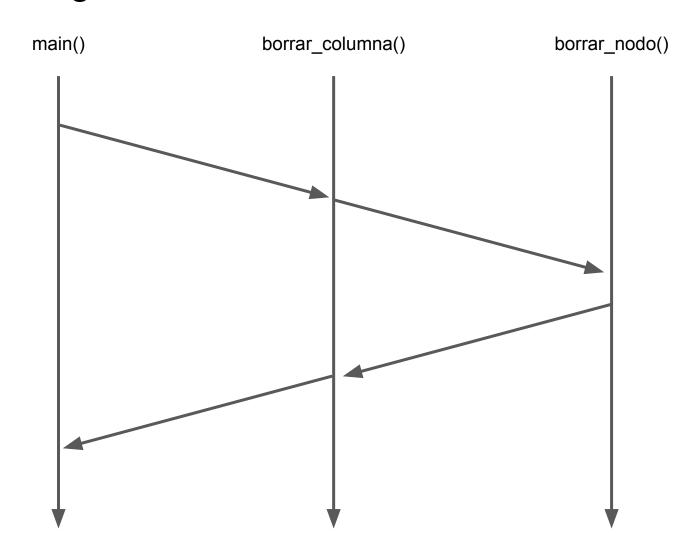

#### Setup

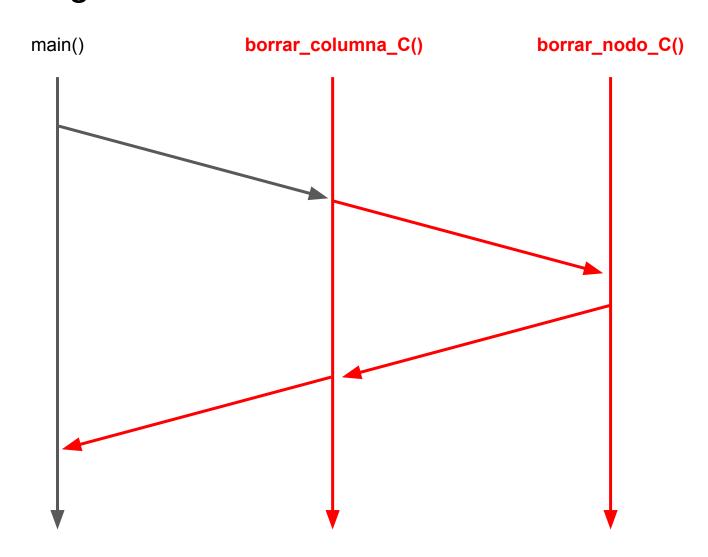

```
[01] (05, 06, 02) [02] (01, 07, 03) [03] (02, 00, 04) [04] (03, 09, 05) [05] (04, 00, 01) 
[06] (09, 11, 07) [07] (06, 00, 09) [09] (07, 14, 06) 
[11] (14, 00, 14) [14] (11, 00, 11)
```

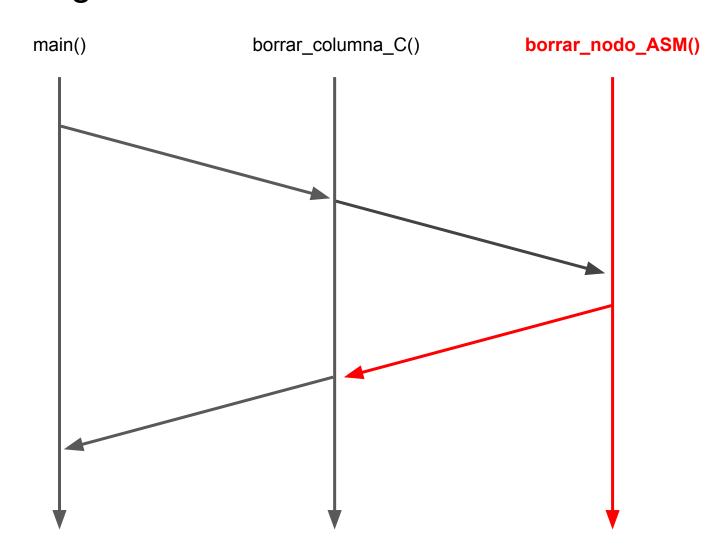

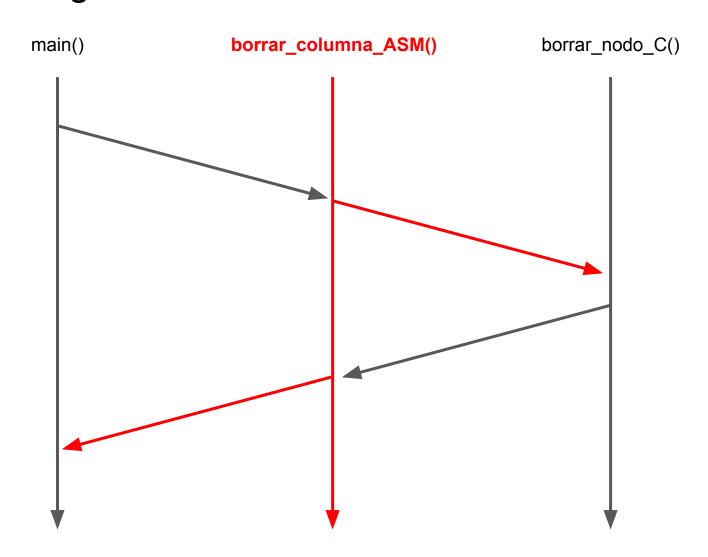

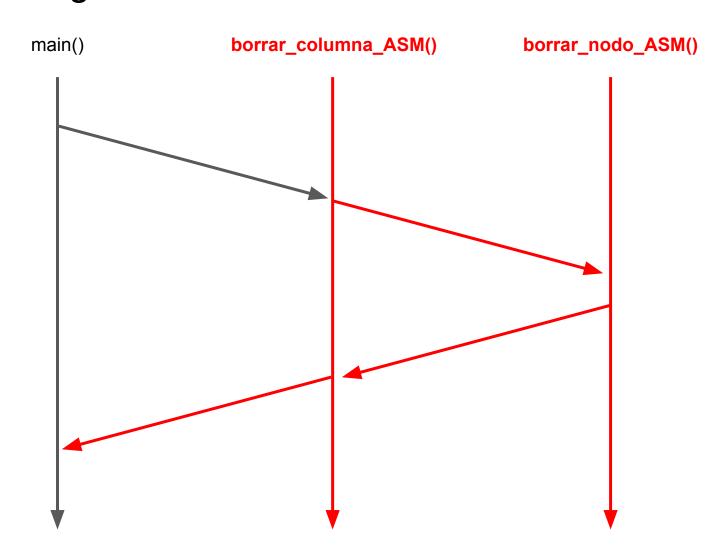

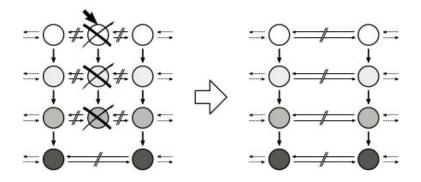

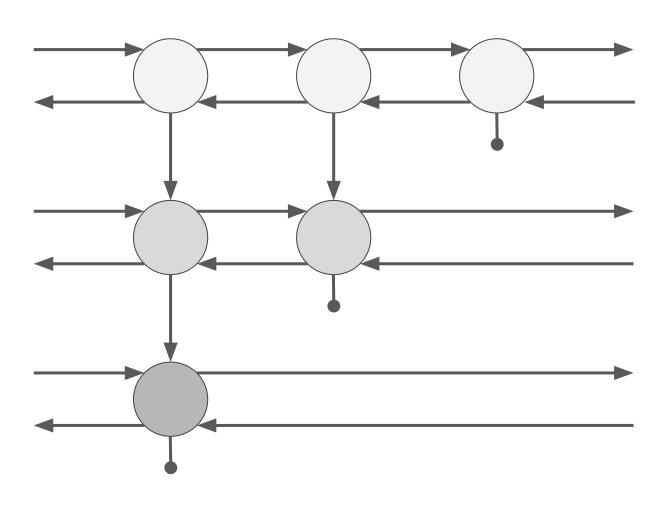

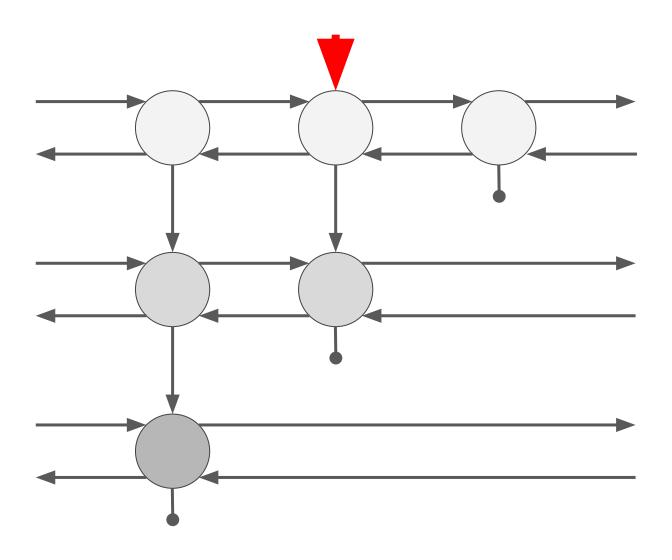

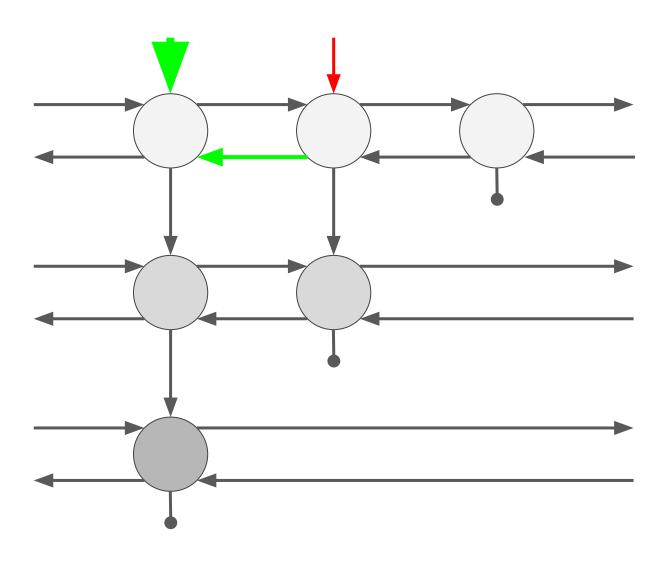

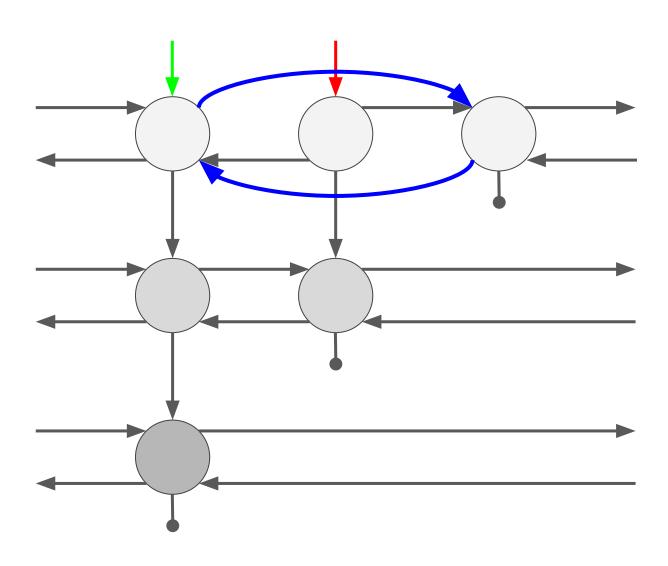

a. void borrar\_columna(supernode\*\* sn): Dada un doble puntero a nodo dentro de la primera lista, borra una columna de nodos. Modifica el doble puntero dejando un nodo valido de la primer lista.

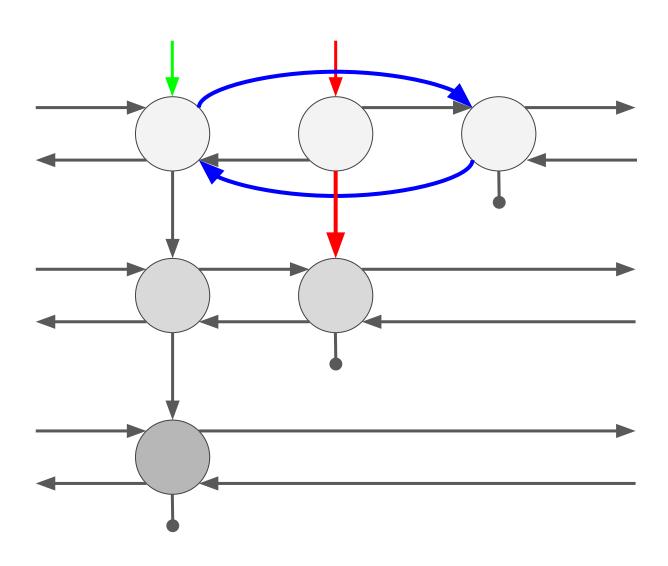

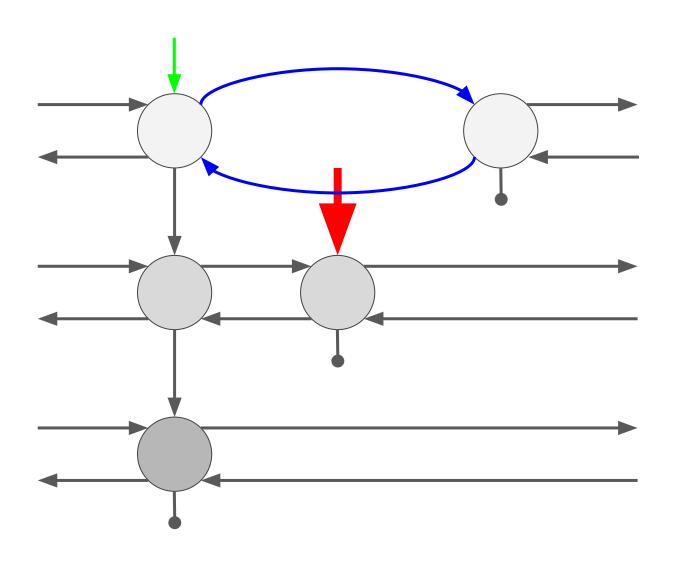

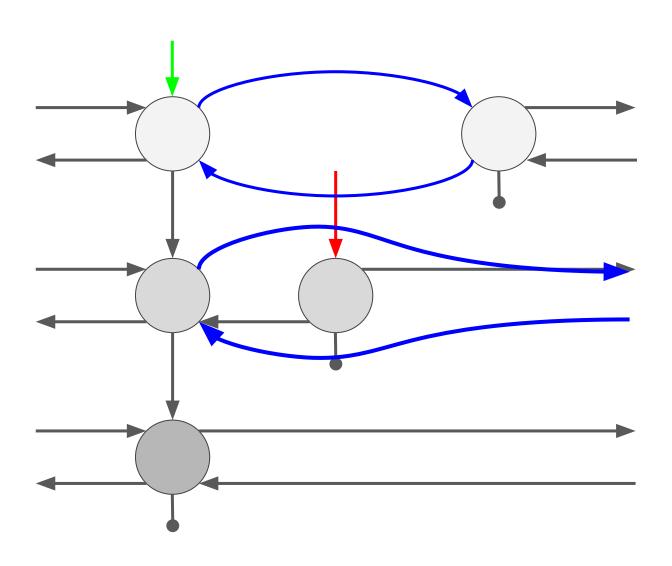

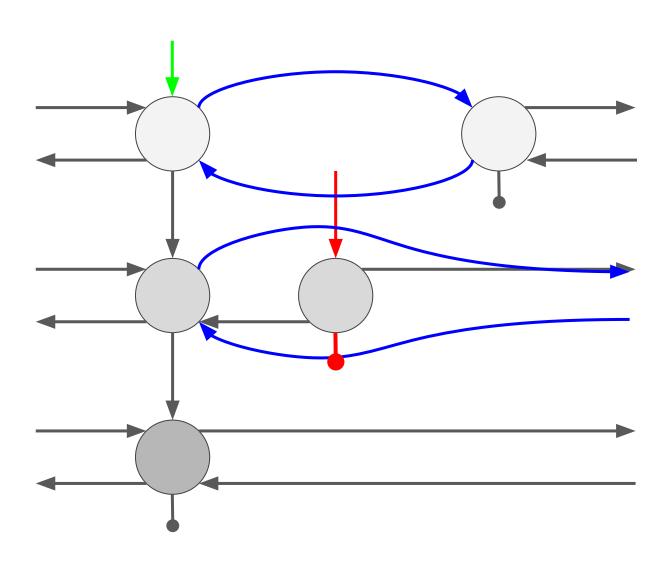

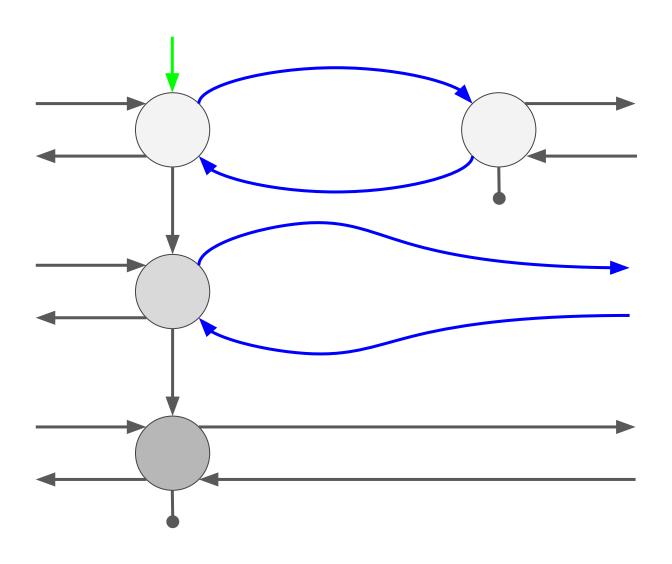

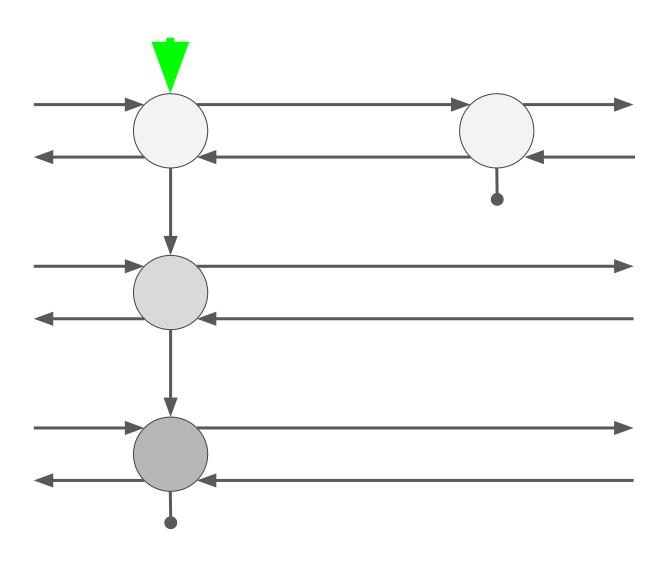

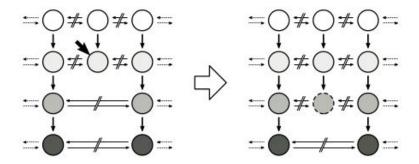

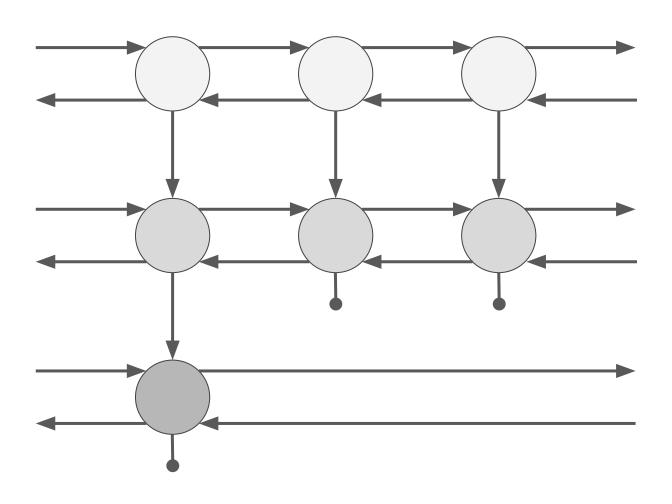

Setup

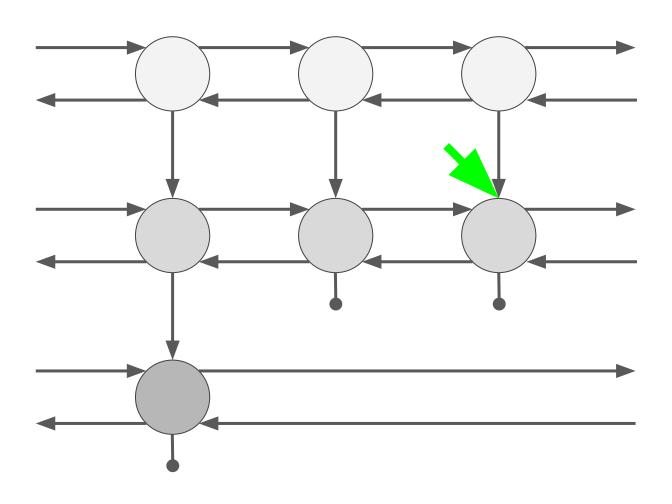

[01](05, 06, 02)	[02](01, 07, 03)	[03](02, 00, 04)	[04](03, 09, 05)	[05](04, 00, 01)
[06](09, 11, 07)	[07](06, 00, 09)		[09](07, 14, 06)	
[11] (14, 00, 14)			[14](11, 00, 11)	

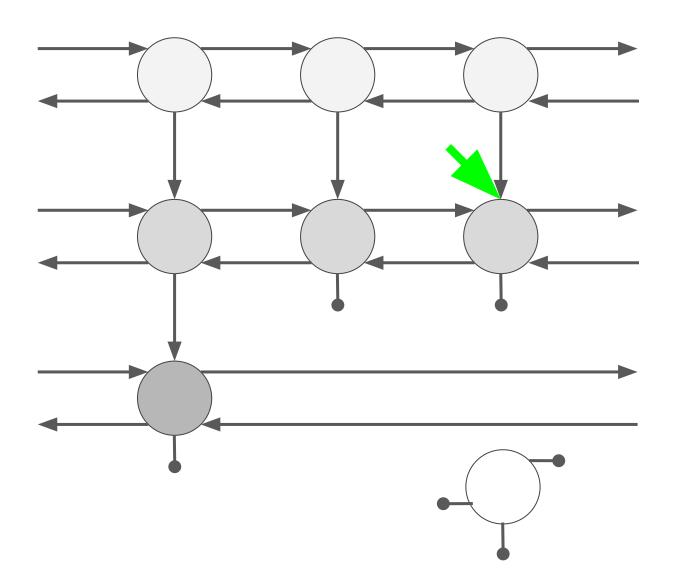

Borrado

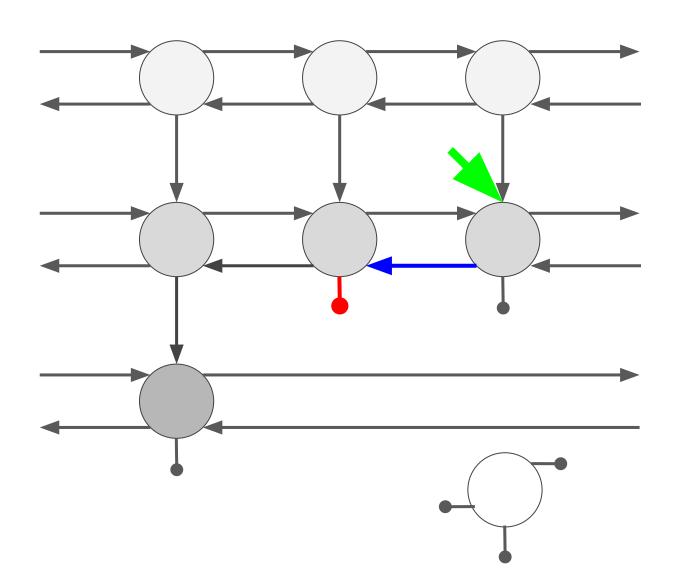

b. void agregar\_abajo(supernode\*\* sn, int d) Agrega un nuevo nodo a la lista inmediata inferior del nodo apuntado. Considerar que el nodo donde agregar puede no tener vecinos inmediatos en la lista inferior.

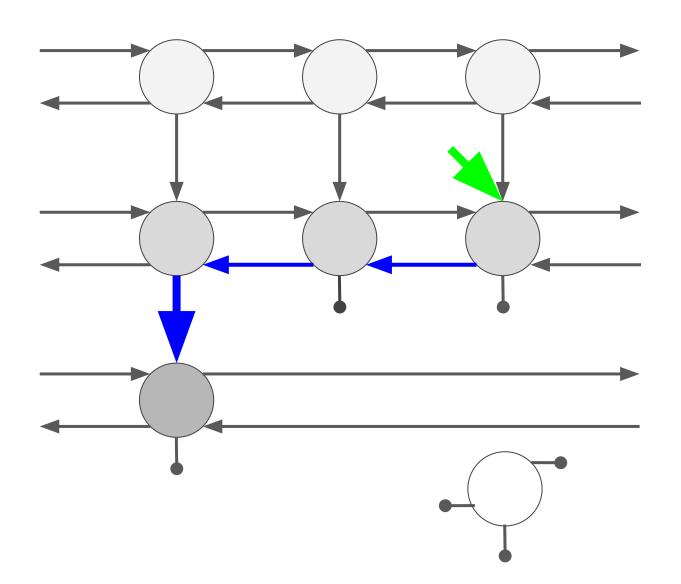

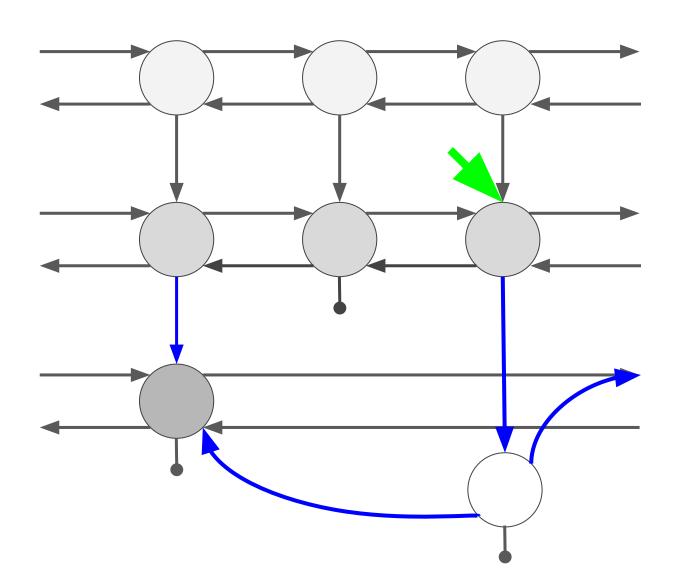

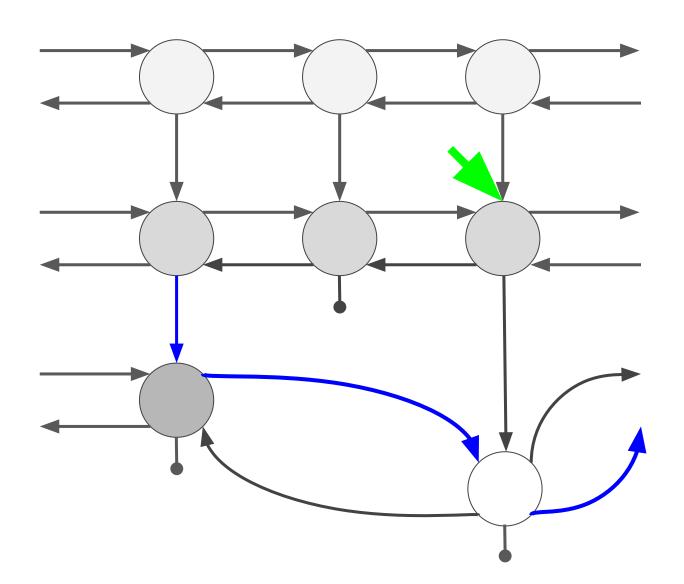

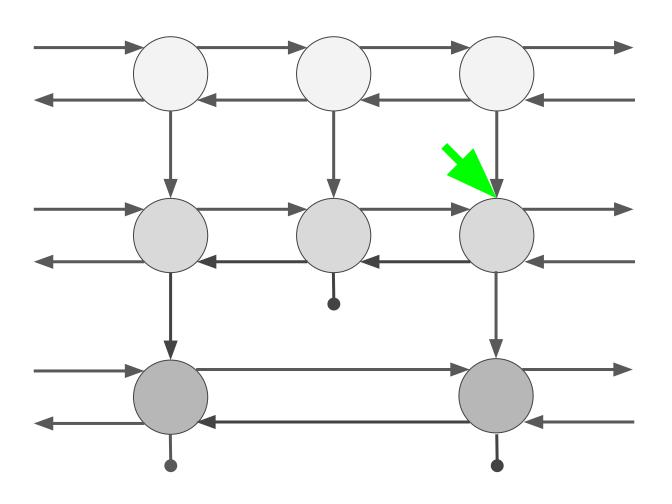

#### Setup

```
[01] (05, 06, 02) [02] (01, 07, 03) [03] (02, 00, 05) [05] (03, 00, 01) [01] (05, 06, 02) [06] (07, 11, 07) [07] (06, 00, 06) [06] (11] (11, 00, 11)
```

#### Agregado

```
[01] (05, 06, 02) [02] (01, 07, 03) [03] (02, 00, 05) [05] (03, 16, 01) [01] (05, 06, 02) [06] (16, 11, 07) [07] (06, 00, 16) [11] (11, 00, 11)
```
